

BRIDGE CENTRALITY: IDENTIFYING BRIDGE SYMPTOMS IN PSYCHOPATHOLOGY NETWORKS

Payton Jones

Harvard University

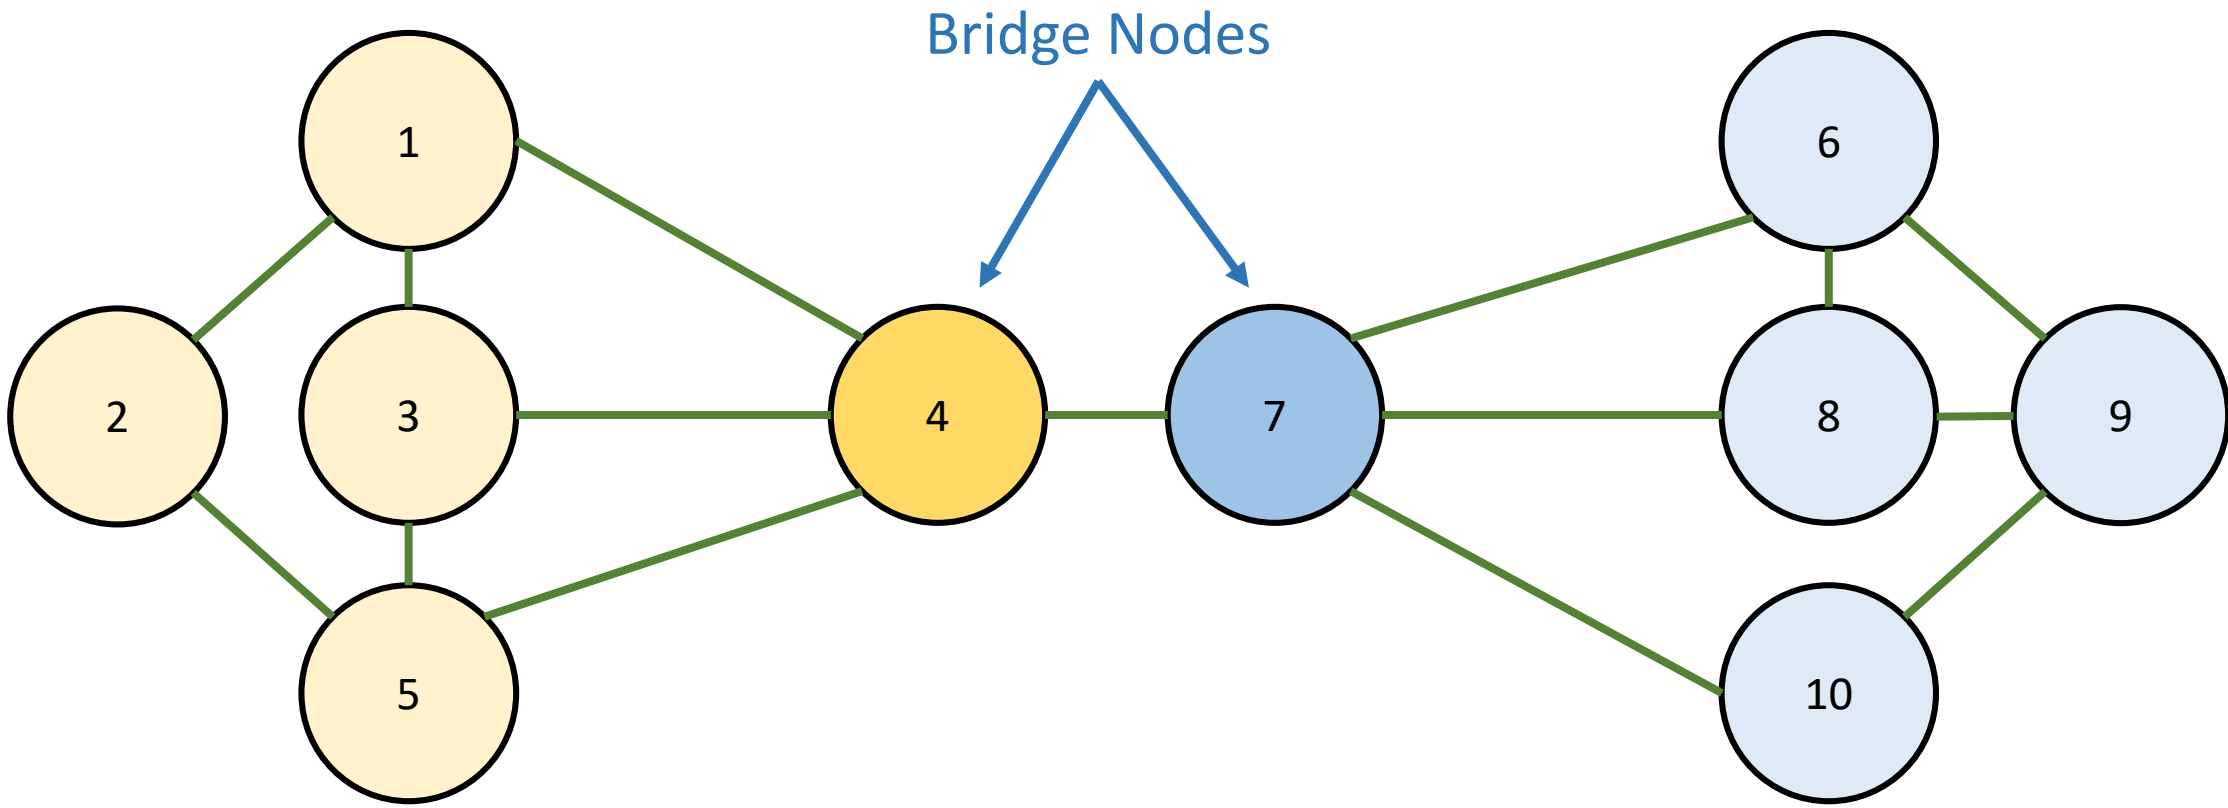

Master's Thesis Presentation

Mental Disorder Comorbidity

Social Anxiety

Depression

Bridge Nodes

The background is a dark teal gradient. In the corners, there are decorative white line-art elements resembling circuit traces or network connections, with small circles at the end of the lines.

MOTIVATING QUESTION:

CAN WE DETECT BRIDGE NODES IN
COMPLEX NETWORKS?

BRIDGE CENTRALITY

$$\text{bridge strength} = \sum_{b \in (N(a) - V(A))} |w_{ab}|$$

$$\text{bridge betweenness} = \sum_{i \in V(G)} x$$

$$\text{bridge closeness} = \frac{|V(G) - V(A)|}{\sum_{b \in (V(G) - V(A))} \sum_{e_k \in E(P_{ab})} \frac{1}{w_k}}$$

$$\text{bridge expected influence} = \sum_{b \in (N(a) - V(A))} w_{ab}$$

Bridge Strength

Bridge Betweenness

Bridge Betweenness

Bridge Closeness

Bridge Expected Influence

The background is a dark blue gradient. In the corners, there are decorative white line-art elements resembling circuit traces or neural network connections, with small circles at the end of the lines.

IS BRIDGE CENTRALITY ACCURATE?

Study 1: Detection in simulations

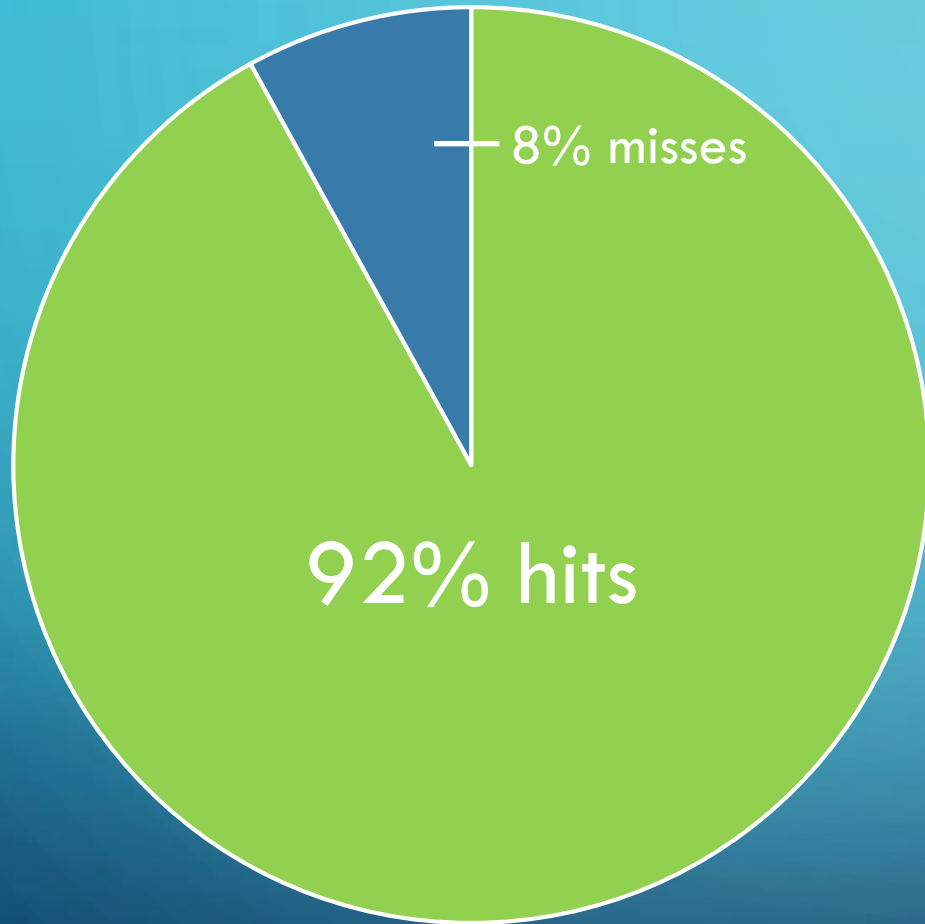

Trials:

1. Adding noise
2. Adding causal direction
3. Adding uncertainty about clusters

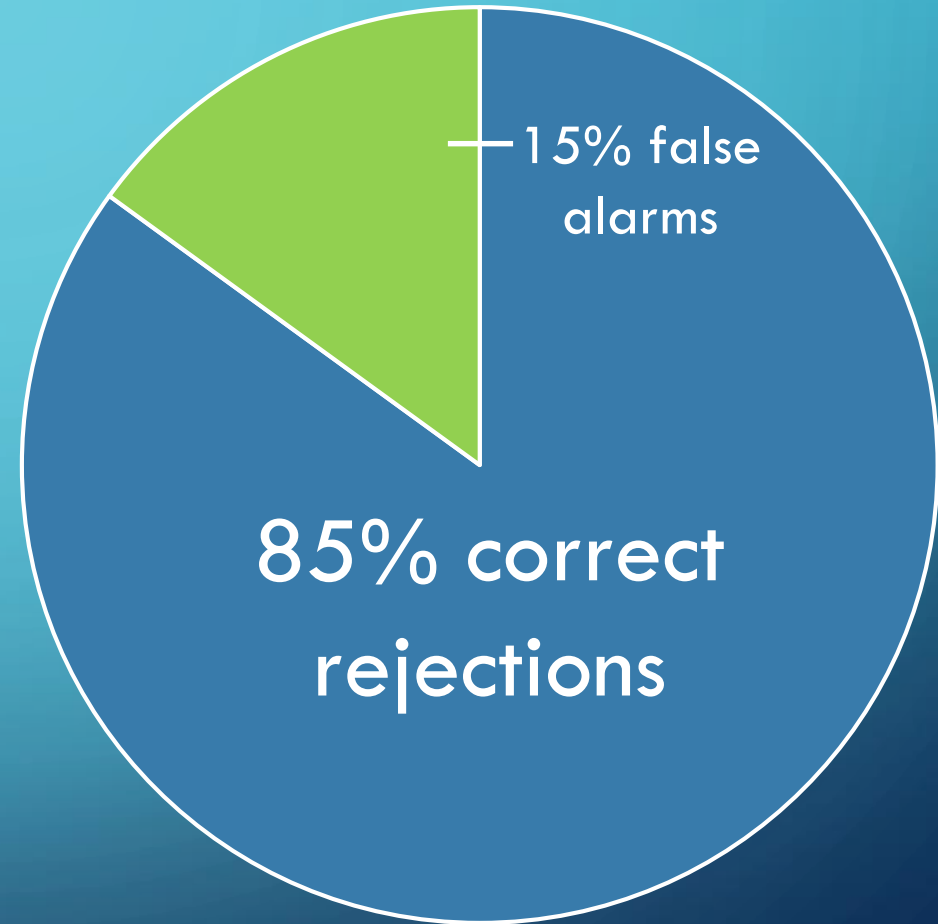

$2 \times 2 \times 2 \times 500 = 4,000$ simulations

Sensitivity

Specificity

The background is a dark blue gradient. In the corners, there are white line-art illustrations of circuit boards or neural networks, with lines connecting to small circles representing nodes.

IS BRIDGE CENTRALITY USEFUL?

Study 2: Simulation of contagion

1. Start with one community activated
2. Allow the activation to spread over many iterations

Study 2: Simulation of contagion

1. Start with one community activated
2. Allow the activation to spread over many iterations
3. Treat a limited number of nodes
4. Bridge centrality vs. previous metrics

Control 1

Control 2

Bridge Centrality

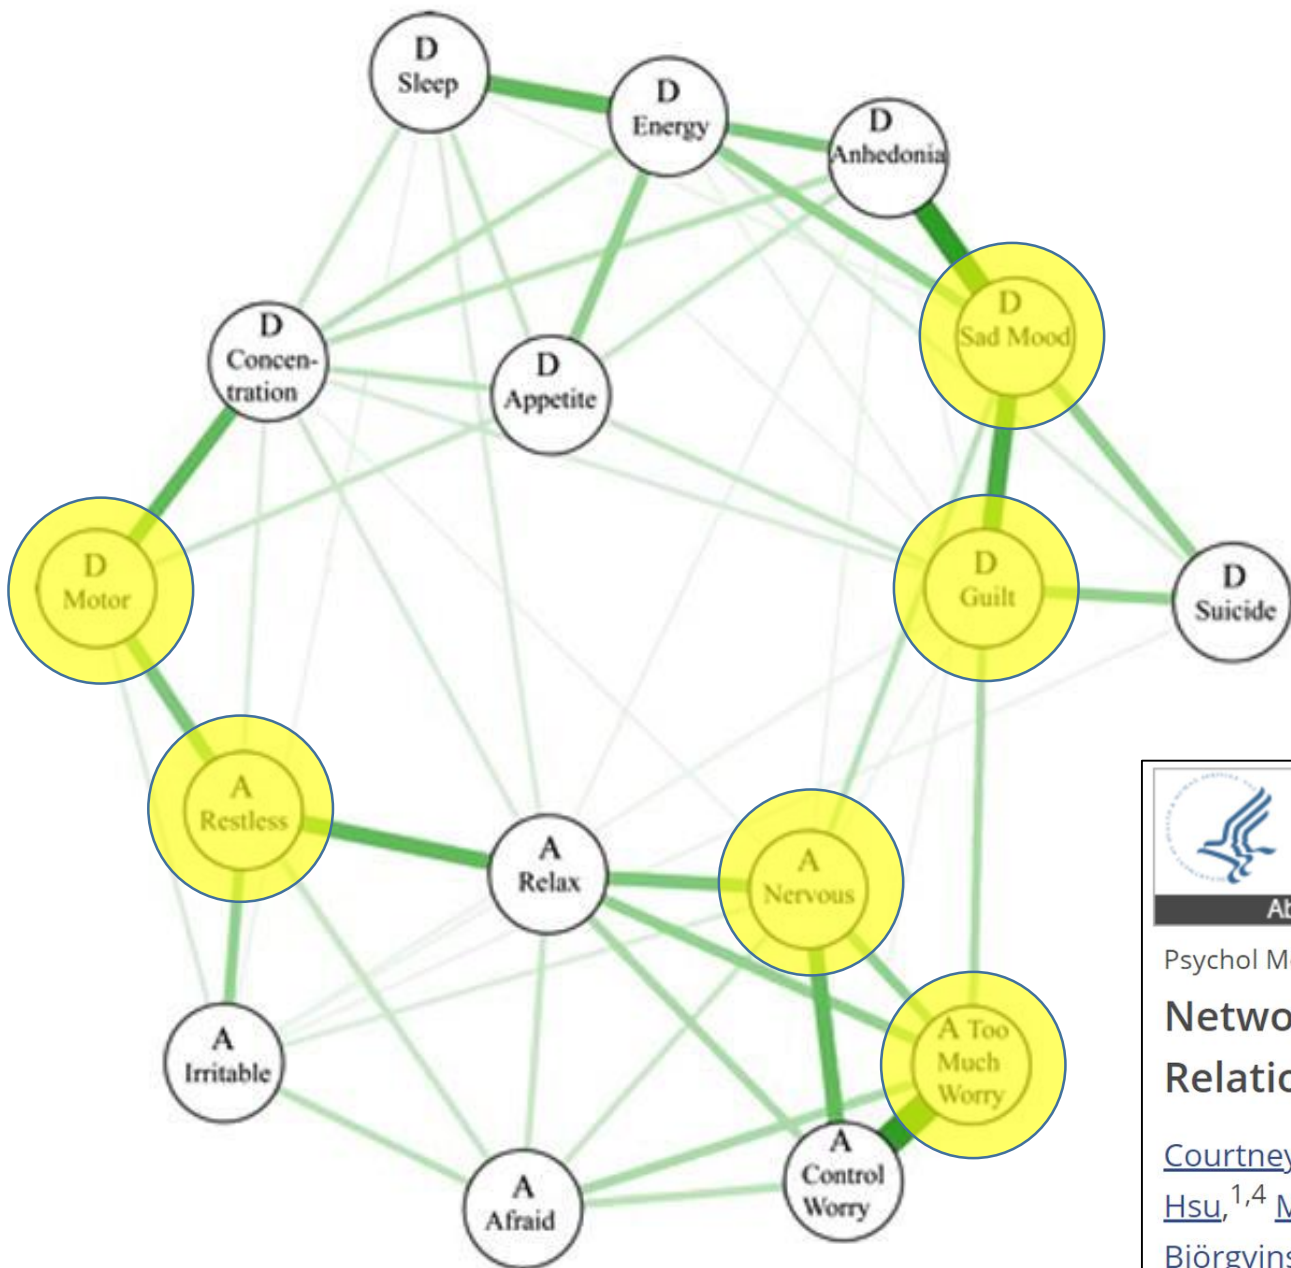

The background is a solid teal color with a subtle gradient. In the four corners, there are decorative white line-art elements that resemble circuit traces or network connections, with small circles at the end of the lines.

DOES BRIDGE CENTRALITY WORK IN
REAL LIFE SITUATIONS?

RE-ANALYSIS:

- 18 published networks
- Bridge symptoms reported by researchers
- Bridge symptoms indicated by bridge centrality

Bridge centrality: A network approach to understanding comorbidity

Contributors: Payton J. Jones, Ruofan Ma, Richard J. McNally

The background is a teal-to-blue gradient. In the corners, there are decorative white line-art elements resembling circuit traces or network connections, with small circles at the end of the lines.

HOW CAN I USE BRIDGE CENTRALITY?

BRIDGE CENTRALITY: BEYOND MENTAL DISORDERS?

- Social Anxiety – Depression
- Grief – Growth
- Borderline Personality – Narcissistic Personality
- State-Trait Anxiety – Neuroticism
- Cognitive – Affective (Attitudes)

	A	B	C	D	E	F	G	H	I	J
1	scaleX_1	scaleX_2	scaleX_3	scaleX_4	scaleX_5	scaleY_1	scaleY_2	scaleY_3	scaleY_4	scaleY_5

GENERATE A NETWORK

```
network <- qgraph(cor(data),  
graph="glasso",  
sampleSize=1000)
```

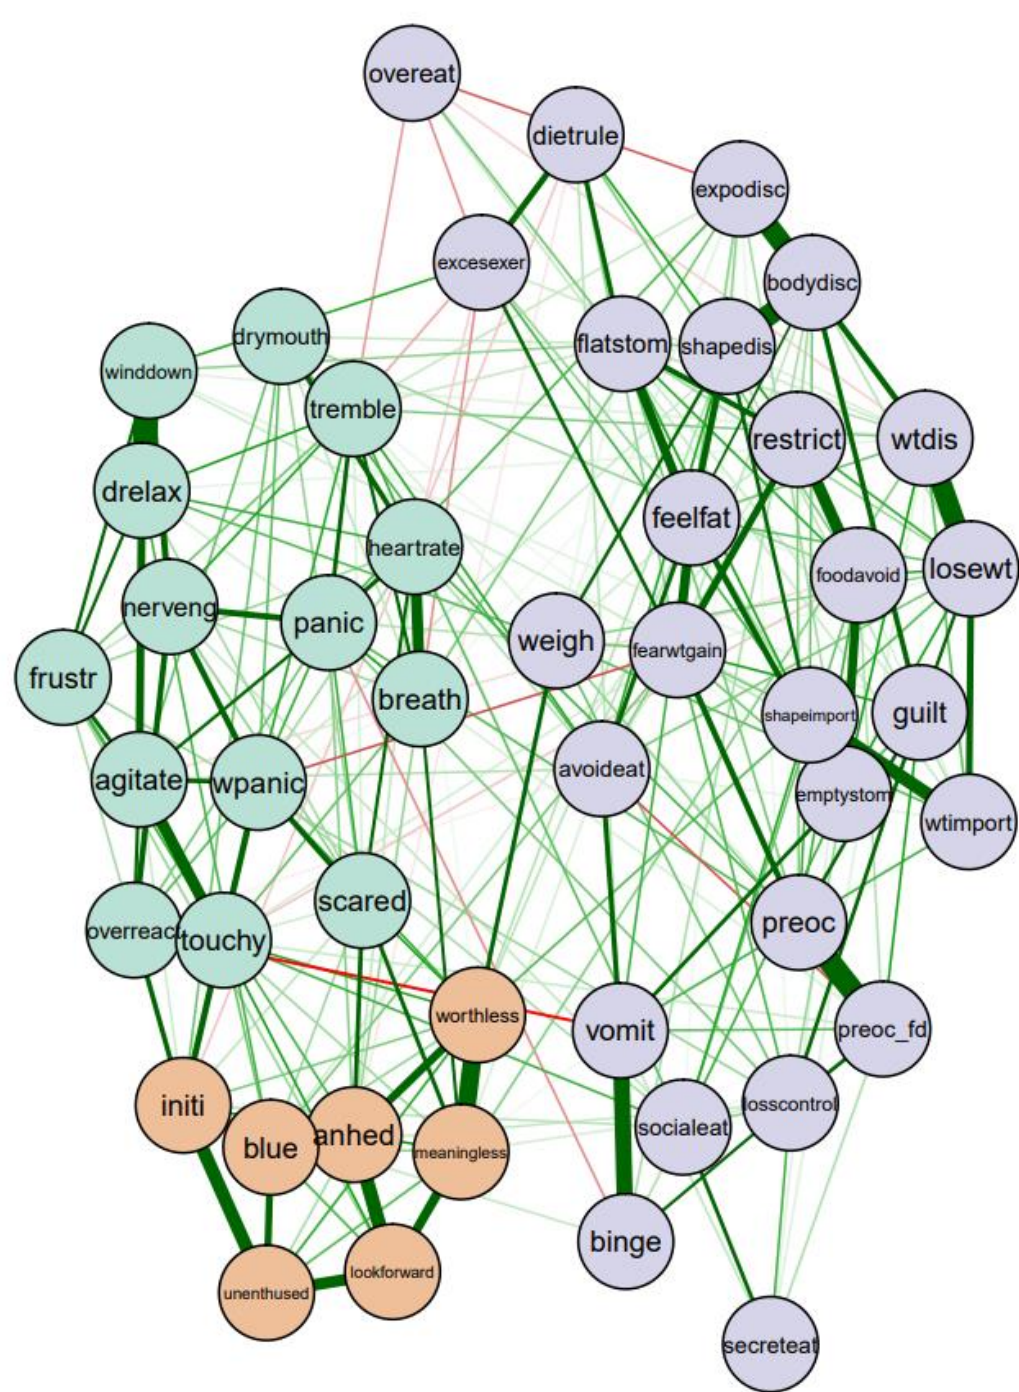

DEFINE COMMUNITIES

```
communities <- c(rep("1", 11), rep("2", 9))
```

BRIDGE CENTRALITY

```
b <- bridge(network, communities)
plot(b, include="Bridge Strength")
```
